

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1-24. (canceled).

25. (new): A recordable information recording medium, comprising:

an encryption key recording area in which an encryption key encrypted based on CSS (Content Scramble System) is recorded in advance; and

a record information recording area in which distributed and encrypted record information encrypted based on the CSS is to be recorded.

26. (new): A recordable information recording medium, comprising:

an encryption key recording area in which an encryption key encrypted based on CSS (Content Scramble System) is recorded in advance; and

a record information recording area in which record information encrypted by the CSS is to be recorded later by user, the encrypted information being distributed from an outer distributing apparatus.

27. (new): The recordable information recording medium according to claim 25, wherein the encryption key is common to all of the recordable information recording medium.

28. (new): The recordable information recording medium according to claim 26, wherein the encryption key is common to all of the recordable information recording medium.

29. (new): The recordable information recording medium according to claim 25, wherein the encryption key is different for each manufacturer or for each seller.

30. (new): The recordable information recording medium according to claim 25, wherein the encryption key is different for each manufacturer or for each seller.

31. (new): An information distributing apparatus for distributing encrypted record information to an information recording apparatus which records the encrypted record information in a recordable information recording medium, comprising:

a generating device which generates an encryption key, the encryption key being equal to an encryption key which is recorded in advance in the recordable information recording medium,

an encrypting device which encrypts the record information based on the CSS; and

a distributing device which distributes the encrypted record information to the information recording apparatus through a telecommunications line, wherein the information recording apparatus records the encrypted record information in the recordable information recording medium comprising an encryption key recording area in which the encryption key encrypted based on CSS (Content Scramble System) is recorded in advance and a record information recording area for recording distributed and encrypted record information based on the CSS.

32. (new): The information distributing apparatus according to claim 31,

wherein the encryption key is common to all of the recordable information recording medium.

33. (new): The information distributing apparatus according to claim 31,

wherein the encryption key is different for each manufacturer or for each seller.

34. (new): An information recording apparatus for recording encrypted record information in a recordable information recording medium, the recordable information recording medium comprising an encryption key recording area in which an encryption key encrypted based on CSS (Content Scramble System) is recorded in advance and a record information recording area for recording distributed and encrypted record information encrypted based on the CSS, the encrypted record information being distributed from an information distributing apparatus, the information distributing apparatus encrypting the record information based on the CSS, the information recording apparatus comprising:

an acquiring device which acquires the encrypted record information from the information distributing apparatus through a telecommunications line; and

a recording device which records the acquired encrypted record information in the recordable information recording medium.

35. (new): The information recording apparatus according to claim 34,

wherein the encryption key is common to all of the recordable information recording medium.

36. (new): The information recording apparatus according to claim 35,

wherein the encryption key is different for each manufacturer or for each seller.

37. (new): An information reproducing apparatus for reproducing encrypted record information from a recordable information recording medium, the recordable information recording medium comprising an encryption key recording area in which an encryption key encrypted based on CSS (Content Scramble System) is recorded in advance and a record information recording area for recording distributed and encrypted record information encrypted based on the CSS, the encrypted record information being recorded by an information recording apparatus, the information reproducing apparatus comprising:

a reproducing device which acquires the encryption key from the recordable information recording medium when the reproducing device reproduces the encrypted record information recorded in the recordable information recording medium, and decrypting the encrypted record information based on the CSS by use of the decrypted encryption key to reproduce the record information.

38. (new): The information reproducing apparatus according to claim 37,

wherein the encryption key is common to all of the recordable information recording medium.

AMENDMENT UNDER 37 C.F.R. § 1.114(C)
U.S. Application No. 09/841,249
Attorney Docket No. Q64260

39. (new): The information recording apparatus according to claim 37,
wherein the encryption key is different for each manufacturer or for each seller.
